基于学术平权与内容质量自治的 S.H.I.T 治理方案探讨

瓦格纳 • 泽诺 [1]
阈限认知大学

[1] 阈限认知大学, 地球, 银河系猎户悬臂

ABSTRACT 针对非建制化公共社群普遍面临的治理失序、公平性缺失与可持续发展难题，本文以反传统学术权威、倡导学术平权的新型互联网社群 S.H.I.T 为研究对象，结合其伪学术化、反建制、反权威的社群特质，探究适配该社群的治理体系构建路径。本文以埃莉诺・奥斯特罗姆的公共池塘资源自主治理理论为核心底座，融合参与式民主理论、同行自治理论与反建制治理理论，首先厘清了 S.H.I.T 社群治理的两大核心起点 —— 反建制的核心精神与理想国悖论的底层约束，进而提出了以学术平权与内容质量自治为核心目标的四大治理方案，包括匿名同行机制、反评审机制、临时契约机制与子刊体系。本文所构建的治理框架，打破了传统学术社群对权威与建制的路径依赖，为 S.H.I.T 社群的长效治理提供了可参考的实践方案，同时也为去中心化互联网公共社群的自治治理提供了新的理论视角与实践思路。

I. INTRODUCTION / 引言

任何非严密组织的公共、公益社群都面临着一个不可避免的问题——如何保证社群的正常运行？如何保证绝大多数人的公平参与？如何保证社群的健康可持续发展？

社群的正常运行，也就是社群必须在一个稳定的既有框架内运作，社群的成员能够在受到框架制约和保护的前提下进行各类行为。而这个框架本身需要满足三个基本条件：**1.公共的**：符合公众共有价值、价值观的；**2.公益的**：符合公众而不是私有或者组织利益的；**3.公平的**：在一定范围内，组成公众的成员之间相对平等。不满足这三个条件，则：1.极易违反所在国的法律法规与公序良俗，造成不良的社会影响；2：极易成为某些极权个体攫取私有利益，或凭借组织名义损害个人利益的手段；3：极易在组织内引起矛盾和冲突，分裂派系（或俗称“小团体”）并进行无意义的派系斗争。

绝大多数人的公平参与，也就是上文中提到的所谓组织框架需要满足的基本条件的最后一点，即社群的成员能够以一个相对公平的姿态进入并进行各种行为。在可能的情况下，应当杜绝大多数职级的筛选和邀请制度，目的就是为了避免“难以获得”的成员等级演化为另一种形式的等级森严的阶级制度，并不可避免的由某些高阶级成员（或俗称“老资历”）向低阶级成员（或俗称“小登”）输出压迫。

社群的健康可持续发展，则是要保证社群能够顺利的延续以及发展，其中包括：1.让社群成员找到归属感；2.以一定的速率吸收新鲜血液；3.让社群内的所有成员有留在社群内的内生动力；4.在保证社群存续的前提下，由成员自发的发展和团结社区。

以上三点总结起来，通俗的来讲，就是“**如何保持社区的活力**”，而本文则以新型互联网社群 S.H.I.T 为例，在结合 S.H.I.T 特有的伪学术化以及反建制、反权威氛围，探讨在保证学术平权和内容质量自治的情况下，S.H.I.T 应当具备怎样的治理精神，并试提出治理方案。

II. Results / 结果

A. S.H.I.T治理的起点

1) 反建制

反建制（Anti-establishment），与“建制”（Establishment）相对，指反对一个社会中长期形成、占据主导地位的权力与规则体系，而无疑，S.H.I.T反对的就是传统学术精英群体，即“学阀”在国际论文发表中长期的垄断状态。

> *本社会实验旨在通过构建一套自运行的评价与治理逻辑，探讨在无行政干预、无传统同行评审（Peer Review）的环境下，学术平权与内容质量自治的可能性。*
>
> *——《S.H.I.T 治理公约 1.0：学术去中心化方案征稿》*

毫无疑问的是，这类垄断状态的核心就是时间的差异，也就是“老资历”通常来说，进入学术界和行业的时间较早，并形成了对新人的天然优势和进行压迫的合法性自我赋权，而S.H.I.T的核心理念，就是要打破这种优势差异，反对自我赋权本身的合理性。

2) 理想国悖论

理想国悖论是本文作者以古希腊哲学家柏拉图的相关哲学思想以及引申义为起点构建的一种情景——在某种社会实验中，人们出于反建制的精神，对一个纯粹的、不带有现实元素的理想国具有天然的向往，但又因为人类个体差异所导致的不再纯粹的人类个体以及现实的引力将这一理想国掷向大地。

理想国悖论描述的就是的历史上由于利益冲突而导致一次次对最理想社会形态的追寻最终走向失败的事实的描述，而本文作者将这一悖论应用到S.H.I.T的治理中，即为了突出这一原则——**不可空想式的追求一个最优解，适当的妥协是治理的必要出路**。

当我们想要建立一个理想国时，这个理想国一定会毁灭，不是因为理想国不存在，而是因为理想国只存在于一个绝对公义的理论的空间内。

B. 理论简述（使用生成式AI创作）

1) 奥斯特罗姆公共池塘资源自主治理理论

该理论为本文的核心理论底座，由诺贝尔经济学奖得主埃莉诺·奥斯特罗姆在《公共事务的治理之道》中提出。该理论推翻了“公共资源必然陷入公地悲剧，唯有依靠政府管控或私有化才能解决”的固有认知，通过大量实证案例证明，非盈利的公共资源，完全可以由资源使用者通过自主制定、共同遵守的规则，实现可持续的自治治理，并提出了自主治理的八项核心原则，包括清晰的边界界定、集体决策安排、监督机制、分级制裁机制、冲突解决机制、组织权被认可等。本文将社群的公共话语空间、公共注意力、公共学术声誉定义为典型的公共池塘资源，基于该理论修正了传统治理对建制化权威的依赖，构建了最小建制下的自主治理框架。

2) 参与式民主理论

该理论源于汉娜·阿伦特的公共领域理论，经罗伯特·帕特南、卡罗尔·佩特曼等学者发展完善，核心是反对代议制民主带来的精英权力垄断，主张公民直接、平等地参与公共事务的决策与执行，认为平等的参与权是民主的核心内核。本文将“学术平权”定义为参与式民主在学术社群场景的延伸，核心是保障所有社群成员拥有平等的内容提交、评议、规则制定与社群事务决策的权利，彻底打破学术权威对话语权的垄断。

3) 同行自治理论

该理论源于开源社区与学术同行评审体系的研究，核心是认为同一领域的从业者，拥有对领域内内容质量的平等评判权，无中心权威的同行自治模式，完全可以实现高质量内容的生产与管控。本文在该理论的基础上进行了创新，剔除了传统同行自治中「资深从业者的隐形权威」，通过全流程匿名化机制，实现了完全平权的同行自治，解决了传统模式中依然存在的等级固化问题。

4) 反建制治理理论

该理论是政治学领域的新兴研究方向，核心是反对精英主导的建制化权力结构，主张自下而上的、去权威化的治理体系，认为建制化的权力结构必然会走向固化与异化，最终背离公共利益。本文的核心创新之一，就是颠覆了“反建制是治理障碍”的固有认知，将社群的反建制文化转化为治理的内生动力 —— 社群成员天然的反权威、反建制特质，会自发监督任何权力的集中与精英的形成，让治理体系实现自我修复与自我迭代，永远不会沦为新的建制。

C. 几点可供参考的S.H.I.T治理方案

1) 匿名同行机制

目前，S.H.I.T对文章的投放几乎没有筛选机制，在浩如烟海的文章中，精通不同领域的社群成员不可避免的陷入到了迷茫的状态。本文提出，采取匿名同行机制，使得S.H,I.T文章的评审更加流畅。

这一机制包括：1.论文标签化，文章作者可以选定一个大的分区，以及一个自定义的可选标签进行展示，使得同行能够更好的锁定自己熟悉的领域。应当注意的是，大分区本身也应突破传统的限制，甚至在一定程度上允许社群成员自建（与之相伴的是不可避免的分区审核）；2.评审匿名化，为了防止某些社群成员进行个人鼓张，应当使得评审过程匿名化，只留下评审的相关头衔或评审等级来帮助文章作者判定评审的专业性来选择性的参考评审的意见。

在这一过程中，又应当提出两个新概念：分区化方案以及评审等级。

分区化方案是指，当用户在某个分区发出文章或者成为某个分区的开拓者，则自动获得该分区的评审资格，评审资格可以在之后通过按照一定比例的每月的随机抽选升级为专业评审，专业评审的意见在一个单独的非文章评论区的模块中展示。评审资格要求专业评审在打分的同时半强制性质的提出书面意见（之所以是半强制，是因为是否使用专业评审资格也可以由社群成员自主选择）。应当强调的是，与普通的评审员相比，这些专业评审在打分上不应有任何的优势或加权。

评审等级是指，当专业评审评审次数并且评审受认可或采纳次数达到一定程度时提升等级。

2) 反评审机制

反评审机制是指，文章作者可以选择性采纳普通评审或专业评审的意见。这一机制成为文章作者与匿名评审之间的博弈机制。当文章作者认为评审意见言之有理时，可以判定为采纳，并在评审认可率外附加一个采纳率的评定数值，从而构成文章作者与评审之间的“相互奔赴”。

采纳率不仅可以突破传统“文章作者必须在面对各种千奇百怪的意见时忍气吞声”的状态，也可以一定程度上解决现有S.H.I.T评审机制的困境。

3) 临时契约机制

临时契约机制是指，无论是负责进行基准审核的审核员或是专业评审，或是往后种种因需产生的各类职称，均采用临时契约＋继承的机制方案。

即，这类职称都以非固定、非连任、资历可继承为前提，每月随机抽选并在社区公示这些职称的匿名名单以及代表作，一是增加优秀文章的曝光度，二是完全社区自主，当社区1/3的成员反对名单时则自动通过备用名单。无论是正式的或者随机的名单获得了通过，其任职期不可超过一个月，不可连任。这种临时契约机制保证不会有成员通过稳定的契约的便利构建影响力。

4) 子刊

本文建议引入子刊这一机制，来合理化筛选严肃创作或图一乐。子刊的意义在于给了严肃创作的作者一个容身之地——子刊不一定是质量更高的分类，但一定是严肃创作作者们的一个去处。这可以避免这些作者倾注了比图一乐哪怕多一份的心血的作品不至于被埋没在浩如烟海的S.H.I.T文章中。

这些方案的出发点均为学术平权以及内容质量自治，对于如何防止学术垄断以及质量下滑、自治机制无力等问题提出了可能的解决方案。

III. Conclusions / 结论

本文不存在任何结论，仅是为 S.H.I.T 社群治理提供一个基于空想主义以及“我寻思主义”的可能的参考。

IV. Materials and Methods /材料与方法

本文未借助任何材料，也没有使用任何方法。自然也不可能存在任何图表。于此致歉。

Acknowledgment / 致谢

于此衷心感谢 S.H.I.T 社群成员的批评指正，在我的初次投稿中，社群成员提醒我不可使用全英文文章，并建议我发表中英文双语文章来水字数，在此再次致以由衷的感谢。

Discussion on the S.H.I.T Governance Scheme Based on Academic Equal Rights and Content Quality Autonomy

Wagner Zeno [1]
Threshold Cognitive University

[1]Threshold Cognitive University, Earth, Galactic Orion Cantilever

ABSTRACT Aiming at the prevalent dilemmas of governance disorder, lack of fairness and unsustainable development faced by non-institutionalized public communities, this paper takes S.H.I.T, a new-type Internet community that defies traditional academic authority and advocates academic equal rights, as the research object, and explores the construction path of a governance system adapted to the community in light of its pseudo-academic, anti-establishment and anti-authority community characteristics. With Elinor Ostrom's theory of self-governance of common pool resources as the core theoretical foundation, this paper integrates the theory of participatory democracy, peer autonomy theory and anti-establishment governance theory. It first clarifies the two core starting points of S.H.I.T community governance: the core spirit of anti-establishment and the underlying constraint of the Utopia Paradox. On this basis, it puts forward four core governance schemes with academic equal rights and content quality autonomy as the core objectives, namely the anonymous peer mechanism, anti-review mechanism, temporary contract mechanism and sub-journal system. The governance framework constructed in this paper breaks the path dependence of traditional academic communities on authority and institutionalization, provides a referable practical scheme for the long-term governance of the S.H.I.T community, and also offers a new theoretical perspective and practical ideas for the autonomous governance of decentralized Internet public communities.

INDEX TERMS Academic Equal Rights; Content Autonomy; Anti-establishment; Community Governance; Common Pool Resource Theory

KEY DECLARATION The main content of this paper was not created with the assistance of generative artificial intelligence. The author of this paper permits reprinting with additional citation sources.

I. INTRODUCTION

Any public and welfare community with a non-rigid organization is faced with three inevitable core questions: How to ensure the stable and orderly operation of the community? How to guarantee the equal participation right of the vast majority of members? How to maintain the healthy and sustainable development of the community?

The stable and orderly operation of a community means that the community must operate within a set of stable established frameworks, under which community members can carry out various behaviors under the constraints and protection of the framework. The

framework itself needs to meet three basic conditions: first, publicness, which conforms to the shared values of the public; second, public welfare, which serves the overall interests of the public rather than the interests of private individuals or specific organizations; third, fairness, which means that community members constituting the public enjoy a relatively equal status within the established scope. Failure to meet these three conditions will lead to three negative consequences: first, it is highly likely to violate the laws, regulations and public order and good customs of the host country, resulting in adverse social impacts; second, it can easily become a tool for some totalitarian individuals to seize private interests or damage individual interests in the name of the organization; third, it is very easy to trigger conflicts within the organization, breed factional divisions (commonly known as "cliques"), and trigger meaningless factional struggles.

The fair participation of the vast majority of people, the third basic condition that the above-mentioned organizational framework must meet, is that community members can enter the community and carry out various behaviors with a relatively equal identity. Where feasible, screening and invitation systems for the vast majority of ranks should be eliminated, with the core purpose of preventing "hard-to-obtain" membership levels from evolving into another set of rigid hierarchical class system, which will inevitably lead to the power oppression of high-level members (commonly known as "veterans") on low-level members (commonly known as "newcomers").

The healthy and sustainable development of the community, with the core of ensuring the smooth continuation and growth of the community, specifically includes four dimensions: first, to let community members gain a sense of belonging; second, to absorb new blood at a stable rate; third, to let all members in the community form an endogenous motivation to stay in the community; fourth, to let members spontaneously promote the development and unity of the community on the premise of ensuring the survival of the community.

The above three points, in layman's terms, are "how to maintain the vitality of the community". Taking S.H.I.T, a new-type Internet community, as the research sample, combined with its unique pseudo-academic, anti-establishment and anti-authority community atmosphere, this paper discusses the governance spirit that S.H.I.T should uphold under the dual goals of ensuring academic equal rights and content quality autonomy, and attempts to put forward an adaptive governance scheme.

II. Results

A. *The Starting Point of S.H.I.T Governance*

1) *Anti-establishment*

Anti-establishment, as opposed to "Establishment", refers to the opposition to the long-formed and dominant power and rule system in society. Undoubtedly, what S.H.I.T opposes is the long-term monopoly pattern of traditional academic elite groups (i.e., "academic tycoons") in the field of international paper publication.

This social experiment aims to explore the possibility of academic equal rights and content quality autonomy in an environment without administrative intervention and traditional peer review, by constructing a set of self-operating evaluation and governance logic.

——S.H.I.T Governance Convention 1.0: Call for Papers on Academic Decentralization Scheme

There is no doubt that the core cause of this monopoly pattern is the time gap - the so-called "veterans" often enter the academic circle and related industries earlier, thus forming a natural advantage over newcomers and the legitimate self-empowerment to implement oppression. The core concept of S.H.I.T is to break this advantage difference and deny the rationality of self-empowerment itself.

2) *The Utopia Paradox*

The Utopia Paradox is a theoretical situation constructed by the author based on the relevant philosophical thoughts and extended meanings of the ancient Greek philosopher Plato: in a social experiment, people have a natural yearning for a pure Utopia stripped of realistic elements out of the anti-establishment spirit, but eventually the Utopia falls to the mortal world completely due to the loss of individual purity caused by human individual differences and the strong gravity of realistic factors.

The Utopia Paradox is a theoretical generalization of the objective fact that in human history, repeated pursuits of ideal social forms have finally ended in failure due to conflicts of interest. The author applies this paradox to the governance of S.H.I.T, with the core of clarifying a basic principle: it is impossible to pursue the optimal solution of governance in a utopian way, and moderate compromise is a necessary prerequisite for governance.

When we try to build a Utopia, it is doomed to perish. Not because the Utopia itself does not exist, but because it only exists in the theoretical space with absolute justice.

B. Brief Introduction of Core Theories (This section is created by generative AI)

1) Ostrom's Theory of Self-governance of Common Pool Resources

This theory is the core theoretical foundation of this paper, put forward by Nobel Laureate in Economics Elinor Ostrom in her book Governing the Commons. The theory overthrows the inherent cognition that "public resources will inevitably fall into the tragedy of the commons, which can only be solved by government control or privatization". Through a large number of empirical cases, it proves that non-profit public resources can fully realize sustainable autonomous governance by resource users through independently formulated and jointly observed rules. The book also puts forward eight core principles of autonomous governance, including clear boundary definition, collective decision-making arrangements, supervision mechanism, graded sanction mechanism, conflict resolution mechanism, and recognition of organizational rights. This paper defines the public discourse space, public attention and public academic reputation of the community as typical common pool resources, revises the dependence of traditional governance on institutionalized authority based on this theory, and constructs an autonomous governance framework under the minimum institutionalization.

2) Participatory Democracy Theory

This theory originates from Hannah Arendt's theory of the public sphere, and has been developed and improved by scholars such as Robert Putnam and Carole Pateman. Its core is to oppose the monopoly of elite power brought by representative democracy, and advocate that citizens directly and equally participate in the decision-making and implementation of public affairs, holding that equal right to participate is the core of democracy. This paper defines "academic equal rights" as the extension of participatory democracy in the academic community scenario, with the core of ensuring that all community members have equal rights to content submission, review, rule-making and community affairs decision-making, and completely breaking the monopoly of academic authority on discourse power.

3) Peer Autonomy Theory

This theory originates from the research on open source communities and academic peer review systems. The core view is that practitioners in the same field have equal right to judge the quality of content in the field, and the peer autonomy model without central authority can fully realize the production and control of high-quality content. This paper innovates on the basis of this theory, eliminates the "invisible authority of senior practitioners" in traditional peer autonomy, and realizes completely equal peer autonomy through the whole-process anonymization mechanism, solving the problem of hierarchical solidification still existing in the traditional model.

4) Anti-establishment Governance Theory

This theory is an emerging research direction in the field of political science. Its core is to oppose the institutionalized power structure dominated by elites, and advocate a bottom-up and de-authoritative governance system, holding that the institutionalized power structure will inevitably become rigid and alienated, and eventually deviate from the public interest. One of the core innovations of this paper is to subvert the inherent cognition that "anti-establishment is an obstacle to governance", and transform the anti-establishment culture of the community into the endogenous driving force of governance - the natural anti-authority and anti-establishment characteristics of community members will spontaneously supervise any phenomenon of power concentration and elite formation, so that the governance system can realize self-repair and self-iteration, and will never become a new establishment.

C. Reference Schemes for S.H.I.T Governance

1) Anonymous Peer Mechanism

At present, S.H.I.T has almost no screening mechanism for paper submission, and community members who are deeply engaged in different fields are inevitably caught in the dilemma of information screening in the massive number of papers. This paper proposes to adopt an anonymous peer mechanism to optimize the review process of S.H.I.T papers and improve the efficiency and professionalism of review.

The mechanism mainly includes two core contents: first, labeled management of papers. The author can select a major section and a custom optional label to mark and display the paper, so that peers can quickly lock the field they are familiar with. It should be noted that the setting of major sections should also break the restrictions of the traditional academic system, and even allow community members to create independently to a certain extent (matched with the inevitable section review mechanism). Second, anonymization of the review process. To prevent some community members from using the review for personal publicity, the whole review process should be anonymous, and only the relevant title or review level of the reviewer should be displayed, to help the author judge the professionalism of the review and then selectively refer to the review comments.

Under the framework of this mechanism, two core concepts are further put forward: the zoning scheme and the review level.

The zoning scheme means that when a user publishes a paper in a section or becomes the pioneer of a section, he will automatically obtain the review qualification of the section; the review qualification can be upgraded to the professional review qualification through random selection at a fixed ratio every month. The comments of professional reviewers will be displayed in an independent module other than the comment area of the paper. At the same time, professional reviewers are required to submit written

review comments semi-compulsorily while scoring the paper (it is semi-compulsory because community members can independently choose whether to exercise the professional review qualification). It should be emphasized that compared with ordinary reviewers, the scores of professional reviewers should not have any weight advantage or special effect.

The review level means that when the number of reviews by a professional reviewer and the number of times the review comments are recognized and adopted reach the established standards, the review level can be upgraded.

2) Anti-review Mechanism

The anti-review mechanism means that the author can selectively adopt the comments from ordinary reviewers or professional reviewers. This mechanism will form a benign game mechanism between the author and anonymous reviewers: when the author believes that the review comments are well-founded and have reference value, he can judge them as adopted, and add an evaluation index of adoption rate in addition to the review recognition rate, thus forming a two-way positive incentive between the author and the reviewers.

The adoption rate mechanism can not only break the dilemma in the traditional model that "the author can only passively accept various kinds of review comments", but also solve the core problems faced by the current S.H.I.T review mechanism to a certain extent.

3) Temporary Contract Mechanism

The temporary contract mechanism means that all positions, whether the auditors responsible for the baseline review, professional reviewers, or various positions set up subsequently due to the development needs of the community, adopt the mechanism scheme of "temporary contract + qualification inheritance".

Specifically, all the above positions take non-fixed term of office, non-re-election and inheritable seniority as the core premise. The list of incumbents is generated by random selection every month, and the anonymous list and representative works of the incumbents are publicized in the community. This design has two core values: first, to increase the exposure of high-quality papers, and second, to realize complete community autonomous governance - when more than one-third of the community members raise objections to the publicized list, the list will automatically become invalid and the standby list will be activated. Whether the official list or the randomly selected standby list is passed, the term of office shall not exceed one month and shall not be re-elected. The temporary contract mechanism fundamentally eliminates the possibility that community members build personal influence and form a new power monopoly through stable tenure authority.

4) Sub-journal System

This paper suggests that S.H.I.T introduce a sub-journal system to reasonably distinguish and screen serious creation and entertaining creation. The core value of sub-journals is to provide an exclusive content position for authors focusing on serious creation - sub-journals do not necessarily represent a higher content quality classification, but must be an exclusive carrier for authors of serious creation. This design can prevent the serious works created by the authors with painstaking efforts from being submerged in the massive entertaining content of S.H.I.T. All the above schemes take academic equal rights and content quality autonomy as the core starting point, and put forward operable solutions to the core problems that may arise in community governance, such as academic monopoly, decline of content quality and failure of autonomous mechanism.

V. CONCLUSIONS

This paper does not contain any absolute research conclusions, but only provides a set of referable schemes based on utopianism and "just-so-thought-ism" for the governance of the S.H.I.T community.

VI. MATERIALS AND METHODS

This paper does not use any research materials, nor does it adopt specific research methods, and naturally does not include any charts. Apologies here.

Acknowledgment

I hereby sincerely thank the members of the S.H.I.T community for their criticism and correction. During my first submission, community members reminded me not to publish papers in full English, and suggested that I publish bilingual papers in Chinese and English to expand the length of the article. I would like to express my sincere thanks again here.
